

Reviewer's report

Title: Factors influencing the implementation of a mental health guideline: an exploratory investigation using psychological theory

Version: 2 Date: 29 November 2006

Reviewer: Lisa Klesges

Reviewer's report:

General

The authors have been responsive to reviewers' comments and suggestions. Additions and clarifications to the revised paper have improved its presentation. The manuscript should make a contribution to the field in highlighting the use of behavioral theory in guideline implementation.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

1. There is a section of repeated text on page 9 that needs correction. Information on inter-rater agreement is included under the "coding reliability" section and also at the beginning of the Results section.
2. Table 2 does not include data on kappa or agreement scores as suggested by reference on page 9. It would be more appropriate to list this as "data not shown" or to include a table with this information.
3. Table 2 is referred to at the top of page 9 before the reference to Table 1. Consider changing references to tables and tabled information so that the first reference is to the first Table.

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
